

SAMWOH

Innovate

Sustainable

Company scope

From its humble beginning as a transport and logistics company since 1975, SamWoh has morphed into a leading integrated construction company which provides full suite of engineering services. These services include the supply of building materials and precast concrete components, recycling of construction and industrial wastes, research and development as well as pavement consultancy services.

In late November 2018, SamWoh had requested for a short presentation and demonstration on one of their site at Changi South, Singapore. A week after, SamWoh had invited us for another short demonstration with one of their client, LTA, as they were interested to know more about ZoneSafe System. LTA was impressed and believe that ZoneSafe System will also helps to enhance the safety and health culture on site.

In conclusion, SAMWOH had requested for a pilot project (2 month) for one of LTA construction site and requested for the ZoneSafe Unit to be install onto one of their excavator.

SamWoh and LTA had agreed with the total costing of the pilot project and will commence in late February 2019.
