

ZoneSafe Accessories

Flexible System Options & Accessories
Offering a Complete Modular Solution for
Every Application.

Transponder Check Points

ZoneSafe Transponder Check Points enable users to quickly and easily check the status of personal safety transponders and confirm they are working correctly.

Units can be installed as a basic stand alone test station, integrated with access control or form part of a complete managed system.

Masking Box

A Masking Box prevents transponders from triggering an alarm. Simply slide the transponder into the holder to prevent it from being detected by a ZoneSafe system.

Masking boxes can hold either a single transponder or multiple transponders. The boxes can be easily installed in to vehicles, buildings or work areas.

Optional Alarms

As standard an audible visual alarm is supplied with an option to add a second or external alarm. Enabling the system to alert both driver, pedestrian workers and to be distinguish from other alarms present in the workplace.

Masking Zone Antenna

The Masking Zone Antenna is used in pedestrian work areas which are safe from moving traffic such as behind barriers. While a pedestrian transponder is in the masking zone it will not be detected by a passing ZoneSafe system.

Desktop Reader

The ZoneSafe Desktop Reader is a simple USB powered desktop device that plugs into your PC or laptop. The reader links to software which allows you to allocate and manage transponders such as replacement staff transponders and visitor transponders.

Handheld Reader

Check the status of transponders on the go, search for transponders and manage transponders on sites without infrastructure. Simple to use handheld reader which can connect to a pc or laptop.

Working with our customers we have designed a range of flexible options and accessories that compliment and enhance ZoneSafe systems. For more information on ZoneSafe and how it can help you protect your assets, please contact us today.
