

Introducing The System with a New Contemporary Design, Improved Performance, Better Connectivity & A Brand New Tag Range.

New Contemporary design

Both the in-cab controller and antenna units have been redesigned offering a more stylish and rugged design. The controller unit also has a new vibrant flashing warning light layout down each side enhanced by the reflective plate.

Improved Performance

The system now has a wider power range (12-36V) and is quicker and easier to install using compatible Ram Mount fixings. The controller has a range of selectable alarm tones with easy to adjust alarm volume using the ZoneSafe app and the antenna is IP67 weather proof with improved tag detection times.

Better Connectivity

The system can now be configured via WiFi direct, has the ability to automatically upload event data to the cloud to analyse, manage and improve site safety and event reports can be sent via email.

New Tag Range

The latest tag technology is now available with vibrating tags to warn the wearer of approaching vehicles and high capacity tags which can last months between charging.

New In-Cab Controller

New Antenna

New High Cap Tag

New VibraTag

Available in South East Asia
